PROFILE

I am a person with high learning ability and skills such as teamwork and good communication. I like to work with responsibility and always give of my best.
Experienced mobile and web developer proficient in Android Studio, Xcode, Swift, Flutter, web development (PHP, Bootstrap, wordpress). Skilled in creating high-quality, user-friendly applications. Passionate about staying updated with the latest trends and technologies in development. Strong problem-solving and collaboration skills.

WORK EXPERIENCE

Developer & IT Supervisor

Freelance Software Developer   Mars 2022-2025

- Led the development and implementation of mobile and web applications, leveraging expertise in iOS app development, PHP, and React.js. Actively involved in all phases of the software development lifecycle, including requirement analysis, coding, testing, debugging, and deployment. . Built and customized React.js applications, integrating APIs and implementing modern, responsive designs to meet client-specific needs. Delivered efficient and optimized code tailored to diverse freelance projects.

  Additionally, I have strong experience working with databases and backend services, including Firebase for real-time data management and Express.js for building RESTful web services and APIs. This allows me to develop scalable, secure, and efficient applications that connect frontend and backend seamlessly, providing reliable data flow and optimized performance across platforms.

IT Specialist

IDENET Geolocalisation ORAN   2017-2022

- Missions:
- Design/development/implementation of mobile and web solutions
- Working with customers/clients to develop innovative and compelling models to solve their most pressing problems
- Develop and maintain geolocation-based applications and services that provide accurate and real-time location information to enhance user experiences. Collaborate with cross-functional teams to integrate geolocation capabilities into existing systems and platforms, enabling businesses to leverage location data for improved decision-making.
- Implement advanced geolocation algorithms and techniques to enhance the accuracy, speed, and efficiency of location tracking and mapping functionalities.
